Senior UX/Product Designer at Vention

February 2020 - Present

As a Product and UX designer, I have developed mobile and web applications across sectors like logistics, healthcare, and beverage services, always focusing on creating high-quality, user-friendly products. My design approach is rooted in Lean UX principles, enabling me to quickly validate assumptions, iterate based on real user feedback, and deliver impactful results in a streamlined manner. I've led user research and usability testing, which helped drive informed design decisions and ensured that each solution I created was user-centric and aligned with business goals.
